

## BED BUGS

### Pre-treatment preparation sheet

#### Before we visit

Please ensure the following actions are completed prior to the pest controller arriving on the day of your appointment.

These actions are required in order for the pest controller to be able to carry out an effective treatment. If these preparations are not completed, the pest controller will be unable to carry out the treatment.

-  Removal all bed linen from the bed(s) that are to be treated.
-  Take down any curtains or nets in the rooms that require treatment.
-  Empty any wardrobes or drawers in the room(s) to be treated, especially those in divan beds.
-  Remove stored items from the floors and clear everything from under the bed.
-  Wash all bed linen, curtains, clothing and other washable items at the hottest temperature recommended by the manufacturer or have it dry cleaned before it is used again/put away.
-  Vacuum the rooms to be treated thoroughly and empty the vacuum cleaner directly into the dustbin or change the bag after cleaning.
-  Make sure rooms to be treated are clear enough for the pest controller to move the bed(s) and furniture easily as they treat.
-  People and domestic pets must leave the rooms being treated.

#### After our visit

Do not enter the treated rooms for at least two hours or until otherwise advised by the pest controller.

Do not Hoover carpets for at least 14 days to allow the insecticide time to work.

**NOTE:** Two treatments are usually sufficient to control the infestation as the products used carry on working for some weeks. The bed bugs should die off gradually after coming into contact with the insecticide. The pest controller will make a 2nd appointment with you. If there is still a problem 4-6 weeks after the last visit you will need to book a new treatment.
